

Breezo Home & Office Mister

Healthy living, working, sleeping...

According to the World Health Organization (WHO), 30% of all buildings suffer from the Sick Building Syndrome (SBS). Modern buildings with ventilation systems and air conditioning are particularly sensitive to the development of SBS. The accumulation of germs, fungus, fine dust, allergens, bad smells and other unwanted pollution is a major threat to the health of employees or residents. As a result, there is considerably more illness and therefore also loss of productivity among employees.

Synbiotic environmental treatment

Patented Synbio® technology makes the entire indoor environment healthier by **promoting healthy microflora** on all surfaces; also those who are inaccessible for normal cleaning.

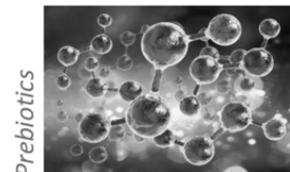

Effects

Synbiotic environmental treatment (the combination of probiotics and prebiotics) has the following effects:

- **Healthy microflora on all surfaces**
- **Less risk of germs and fungi**
- **Fewer allergies (up to 93% decrease!)**
- **Less pollution**
- **Less disturbing odors**

Probiotics

Prebiotics

Hospital technology at home!

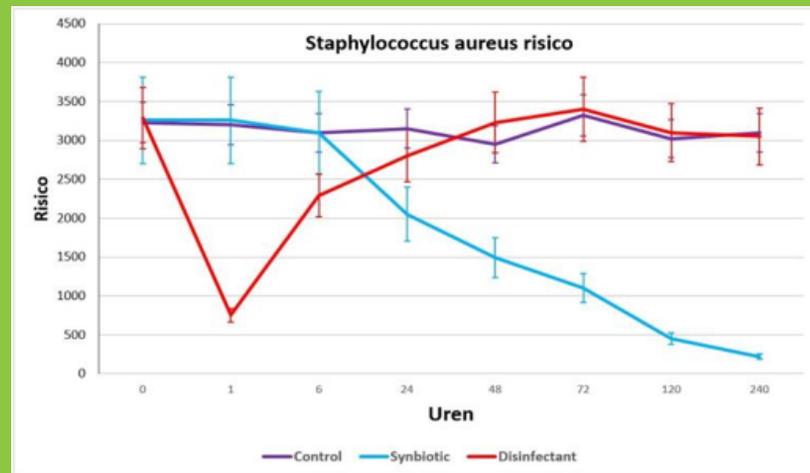

Not all surfaces can be sufficiently treated with normal cleaning. Some are difficult to access and others cannot be cleaned frequently enough. That is why the Breezo Home & Office mister has been developed that permanently treats **all surfaces** with Synbio® technology.

The Home & Office mister spreads approximately **1 million probiotics per second** via ultrasonic waves, which means that after a few minutes the entire room is filled with good bacteria. The prebiotics then ensure the further development of a good microflora.

Scientifically proven

More than 10 years of research* in hospitals on 12,000 patients, showed that surfaces occupied with probiotics give rise to:

- Decrease in risk of germs by more than 80% permanently.
- Reduction of antibiotic resistance among germs
- **54.8% less infections**

Safety

The Synbio® products are 100% safe using ingredients that can be found in nature. The probiotics come from soil and water and the prebiotics from chicory root. Years of application of the products in hospitals, schools and daycare centers proves the highest reliability. In addition, the most important quality and safety labels have been awarded to Synbio®. (ATCC class 1, European Food Agency QPS, EU Ecolabel and positive toxicity reports from OECD).

User friendly

- Attach or place the Home & Office mister in your living, living or leisure environment.
- 1 mister per space of 50m²
- Set to automatic misting
- Charge once a month and place a new filling
